

ENVIRONMENTAL APPROACH TO THE DESIGNED PRODUCTS

In ERNA-MAŞ, we have aimed at establishing "sustainable balance" by using technologies that enable the realization of cleaner and longer lasting production activities based on the efficient use of natural resources.

Opening a new perspective to the technology production, ERNA-MAŞ aims to set the sector to a new direction by the slogan of "efficient consumption – clean production." For that purpose, at ERNA-MAŞ facilities we have started to develop focal points encompassing many different pillars from the use of raw materials (natural resources) to in-house energy efficiency, from product designs to greenhouse emission values.

In that context, at ERNA-MAŞ facilities we have in place ISO 9001 Quality Management System, ISO 14001 Environmental Management System, ISO 27001 Information Security Management System and ISO 10002 Customer Satisfaction Management System. Application efficiency of management systems is continuously monitored and maintained by independent organizations and internal audit mechanisms.
