

ENVIRONMENTAL PERFORMANCE

At ERNA MAŞ facilities we have been continuously improving our environmental performance in both actual and statistical terms with the help of our production method and conscious personnel. Thanks to the production technologies and the production method that we use, the quantity of finished products has increased in comparison to the previous years, but the amount of produced waste has been reduced in contrast.

At ERNA MAŞ facilities, wastes are sorted at the source. The approach adopted at the initial design phase of products is to have maximum production yield by minimum use of natural resources. This can help reduce the amount of natural resources used and therefore the amount of wastes produced.

At ERNA MAŞ we have performed some work on energy efficiency as a result of which the amount of consumed electrical energy has been reduced despite the increase in the quantity of products in comparison to the previous years.

At ERNA MAŞ, personnel is continuously provided training on environmental awareness. We have aimed at organizing periodical training sessions on environmental awareness and making this training more permanent by on-site applications. Based on the training provided so far, no environmental accidents have occurred in ERNA MAŞ Hadımkoç and ERNA MAŞ Cankiri facilities.
